

Hall Longmore

Steel Pipe For Water, Petro-Chemicals, Gas, Construction and Mining

Manufacturing Pipe since 1924.

Hall Longmore ranks amongst the leading international manufacturers of large diameter steel pipe for the transportation of water, gas and petro chemicals. The state-of-the art manufacturing facilities feature the most modern pipe making equipment and technology driven coatings and linings application processes.

Electric resistance welding (ERW – up to a diameter of 610 mm) and submerged arc welding (SAW – up to a diameter of 2540 mm) technologies are used to produce pipe from different grades of carbon steels. The in-house application of high performance protective coatings and linings to steel pipe is an essential ingredient when years of trouble-free pipeline service is a pre requisite.

Since 1924, the Hall Longmore name has been synonymous with quality and to this end holds the esteemed accreditation of the American Petroleum Institute (API), ISO 9001:2008, BS OHSAS 18001:2007 and ISO 14001 certification.
